Skills

Languages: TypeScript, Python, Java, Ruby, C++, SQL, Bash, OCaml
Frontend: React, Redux, Next.js, Svelte, Tailwind, Storybook, React Native, Figma
Backend: Express.js, FastAPI, Flask, Java SpringBoot, Ruby on Rails, PostgreSQL, MongoDB
Testing: Jest, Mocha, Chai, Cypress, Selenium, Playwright
Cloud/DevOps: Jenkins, Kubernetes, AWS, Kafka, Docker, GitHub Actions
AI/ML: Claude API, OpenAI API, Copilot, Ollama, n8n, Huggingface, Pandas, PyTorch

Work Experience

Sumitomo Mitsui Banking Corporation — **New York, NY**
Software Engineer — **Jul 2025 - Present**

- Managed complex form state and UI engines for dynamic deal structuring, driving live WebSocket data updates and cross-session synchronization using React, Redux-Saga.
- Owned 15+ major features end-to-end across deal structuring, risk assessment, and data management, from user feedback through production, supporting >$100M deals daily.
- Architected live cross-view messaging channel using the OpenFin API to synchronize live deal fee updates across views, eliminating redundant WebSocket data reception from the backend.
- Extended deal structuring platform with real-time collaborative commenting and editing via WebSockets, enabling concurrent deal review across teams.

Sumitomo Mitsui Banking Corporation — **New York, NY**
Software Engineer Intern — **Jun 2024 - Aug 2024**

- Architected full-stack microservices using React/Redux, Java Spring Boot, and Kafka to automate EOD bond price marking, reducing manual workload by 20%.
- Researched and presented findings on tech modernization and data infra trends in financial markets to senior stakeholders.

Homer, LLC. — **New York, NY**
Lead Software Developer — **Apr 2024 - Jan 2025**

- Designed and implemented a multi-feature predictive risk scoring pipeline using Pandas, Flask, and Celery - classifying inbound vessels by hazard likelihood from cargo type, port of origin, and seasonal patterns - achieving 92% accuracy and enabling inspectors to triage hundreds of daily arrivals rather than random-sampling a subset.
- Spearheaded full-stack development of Calypso using React, TypeScript, FastAPI, and PostgreSQL, delivering the inspection risk platform end-to-end and directly enabling data-driven vessel triage at scale.
- Led bi-weekly sprints for a 4-developer team, driving MVP delivery and iterative feature releases aligned to Coast Guard operational feedback.

Thingee Corporation — **Remote**
Software Developer Intern — **Jan 2023 - Aug 2023**

- Shipped 22 features and 40+ bug fixes across a production SaaS codebase, and built out data migration scripts, AWS deployment automation, and a Playwright e2e test suite foundation.

Projects

Hubba (https://github.com/hubba-lubba/hubba)

- Architected frontend structure, API schema, and DTO design alongside backend lead, establishing scalable component architecture and development standards for a 5-person team.
- Conducted market validation through 20+ user interviews and competitive analysis, informing product features and business model for a gaming creator monetization platform.

Education

Stevens Institute of Technology — **2021 - 2024**
Bachelor of Science, Computer Science | GPA: 3.92/4.0 | Summa Cum Laude | Dean's List (All Semesters)
Relevant Coursework: Natural Language Processing, Deep Learning, Web Programming, Mobile Systems and Applications, Systems Programming, Enterprise & Cloud Computing, Principles of Programming Languages, Agile Methods for Software Development, Object-Oriented Analysis and Design
